Hi Dr. Gaedigk,

Your 2025 StarTRAC-CYP2D6 paper directly shaped how we handle allele-specific read phasing in our CYP2D6 caller. I wanted to reach out because PharmVar's nomenclature is the scientific ground truth our entire engine is built against.

I'm Abhimanyu, building Anukriti - a deterministic pharmacogenomics inference platform. We implement PharmVar star allele nomenclature across 13 pharmacogenes (CYP2D6, CYP2C19, CYP2C9, CYP3A5, DPYD, SLCO1B1 and others) with CPIC-governed phenotype calls, population-aware reasoning across 5 super-populations, and a named-refusal taxonomy — when evidence for a specific ancestry-gene-drug combination is insufficient, we return a named refusal with a rule ID rather than a confidence-degraded answer.

My question: does PharmVar have a formal pathway for third-party tools that implement your nomenclature to be acknowledged or listed as implementers? Even informal guidance on how to stay aligned with PharmVar updates as we scale would be enormously helpful. Would you be open to a brief exchange over email?

Best,  
Abhimanyu R B

Abhimanyu,

We are glad to hear that PharmVar is a useful resource.

If you have a PharmVar account, you have the option to receive an email notification when a new database version is released. Otherwise, please be aware of our user terms and conditions (<https://www.pharmvar.org/terms-and-conditions>). Data can be retrieved via API (<https://www.pharmvar.org/documentation>). We also ask users to cite our publications in addition to our website as citations are measurable while website mentions are rather difficult to track.

We are currently not having a formal pathway to acknowledge third party users/implementers as PharmVar is a free resource making this difficult to track. We are exploring option though.

Thank you

Andrea

Hi Andrea,

Thank you so much for the quick response this is exactly what I needed.

I'll set up the API integration and register for version notifications right away. We'll make sure to cite your publications formally in everything we publish.

One small ask: as someone at the center of the PGx nomenclature ecosystem, is there anyone you'd suggest I speak with particularly around population-specific allele characterization for South Asian genomes? That's our biggest data gap right now and I want to make sure we're building on the right foundations.

Thank you again, Abhimanyu

Abhimanyu,

We are rarely receiving submissions from this part of the world. You may want to contact the senior authors on papers who have published on the genes of interest.

- If you are interested in Thai you may want to contact c. Sukasem at [chonlaphat.suk@mahidol.ac.th](mailto:chonlaphat.suk@mahidol.ac.th)

- Marin Kennedy has done some work as well is native New Zealanders [martin.kennedy@otago.ac.nz](mailto:martin.kennedy@otago.ac.nz)
- Andrew Somogyi may be able to direct to other people [andrew.somogyi@adelaide.edu.au](mailto:andrew.somogyi@adelaide.edu.au)
- There is unfortunately not much info for the Indian subcontinent

Hi Andrea,

This is incredibly helpful - thank you for taking the time.

Your 2023 pharmacoequity review framed something we'd been building toward intuitively but hadn't articulated as clearly - the idea that allele characterization gaps in underrepresented populations aren't just data problems, they're equity problems with clinical consequences. That's essentially the founding premise of Anukriti.

The gap in South Asian data being as sparse as it is at the source level is actually important validation for why we're building this. I'll reach out to Dr. Sukasem, Dr. Kennedy, and Dr. Somogyi right away - particularly Dr. Somogyi if he can point toward South Asian-focused work.

Really appreciate your generosity here.
